Resume Checklist v1.1

This checklist gives you a list of ways to make your resume excellent.

This advice is for: software engineers applying to software engineering roles at tech companies and startups. It is less applicable to web developer gigs, engineering gigs at finance companies, etc.

The idea is basically to update your resume as you do the checklist.

Read the item, correct it, check the box.

My one ask: If you look at the checklist, you must use it! Create a fork of your resume. You don't have to use the edited version at all, but it would make me feel great to know that the tool was used.
